

HTML Assignments - FirstBit Solutions

1. Create html page with heading, sub heading and sub-sub heading. Which tags will you use?
2. Create a page with 3 wallpapers from internet. Display a line after each wallpaper.
3. Write code to print following formula on web page
$$(a+b)^2 = a^2 + 2ab + b^2$$
4. Insert an image inside anchor tag. such that clicking the image takes you to the website
5. Create a web page with different images and apply height, width border attributes to the same.
6. Create a web site with following pages :
 - a. Home.html: It will contain general information about sports and four hyperlinks as Football, Cricket, Hockey, About Us.
Clicking on these hyperlinks will open the respective pages in the same browser window but about us section should open in different Window or tab.
 - b. Football.html : Contains images of football and overall information of football.
 - c. Cricket.html : Contains images of cricket and overall information of cricket. This page also contains a set of hyperlinks with names of Players like
Rohit Sharma
Virat Kohli
KL Rahul
Jaspeet Bumrah
Every name on this page should be linked to the player's profile on cricbuzz website. So when a name is clicked, it should open the cricbuzz profile page in a new tab/windows
 - d. Hockey.html: Contains images of hockey and overall information of hockey.
 - e. AboutUs.html: Contains details of the organization.
7. Create a form to accept details from a student for college registration. Think about what inputs you will like to accept from the student. Design the form accordingly. You should be using these tags compulsorily – input, label, radio button, check box, date, text area, and button
